## Skills

### Programming Languages

Java, Python, MySQL

### Front-end Languages

HTML, CSS, Javascript, jQuery

### Frameworks

Spring MVC, Hibernate, Bootstrap, Flask

## Project Experience

**RadCheck**, built with Java, Spring & Spring Security, Thymeleaf, Hibernate and Bootstrap  
*Web application that checks background radiation readings in your local area and around the world*

- Makes queries on Google Maps, Safecast and AirVisual to track background radiation measurements and air quality index from user defined locations
- Persistently records JSON results to a database, and after 21 hours can be refreshed with a new search
- Can report on multiple locations at once with a report building feature

**BizSysCon Twitter**, built with Python - <https://twitter.com/BizSysCon>

*Automated Twitter account that likes relevant tweets and welcomes new followers with a direct message*

- By searching for relevant hashtags and likes from brands the company carries, likes on these tweets increase customer engagement and awareness
- Searches for accounts that have followed the company account, follows them back and sends a welcome message via Twitter's direct message service

## Work Experience
